

# Weekly Report 1

Aki Kankaanpää

**Hours spent this week:** 4hrs

**What have you done this week?**

Filled out the Specification document and read sources.

**How has the project progressed?**

I am happy to have a plan on what to do, and where to start. Progress on reading documents is underway.

**What did you learn this week / today?**

I learned about the Markov Chain, and read more about the MiniMax algorithm. Furthermore, I learned about alpha-beta pruning in regards to the branches in MiniMax. This piqued my interest into choosing this topic!

**What has been unclear or problematic?**

Currently the only unclear matter is whether or not my topic is clear enough, solid and sound, and fits the course goals. I personally think it does.

I am still yet to decide whether or not I should write my code in python (as I am more knowledgeable on it) or C# (which might offer an easier time with the algorithm implementation, as there is more past documentation on it).

**What next?**

Reading more about how to implement the algorithms, and starting work on the programs. First I will create the game of rock-paper-scissors, and then start work on the algorithms, all next week!
