

# Weekly Report 6

Aki Kankaanpää

**Hours spent this week:** 37 hrs

## **What have you done this week?**

Performed tests using poetry and pytest to check the functionality and validity of my algorithm.

Added a new document showcasing the test coverage.

Additionally, I created a new UI labeled UI.py, which makes playing more intuitive for players! (very basic, no pictures)

## **How has the project progressed?**

Great, home stretch! 98% of the code is covered (see index.html in the coverage folder of tests) by the tests, and the small amount that isn't is mostly trivial

I also now have a visually (more) appealing UI to present.

## **What did you learn this week / today?**

I learned what I could still improve based on the tests I was running. I also learned how to properly use poetry and pytest to check for issues.

## **What has been unclear or problematic?**

Everything seems clear.

## **What next?**

Prepare to present the project, and to add final touches based on feedback.
